

Wanted: Mobile Developer (React-Native)

Full-time

Hello, I'm Fabien, Green-Got's CTO, and I'm looking for a Mobile Developer to expand our team.

About [Green-Got](#)

Born from the observation that our banks were not doing enough to fight global warming and protect our planet, Green-Got's ambition is to become the first mobile bank that uses its users' money to protect the planet.

We have already a time of 20 people and 25k pre-registered that are on our waiting list.

About the job

We are building a bank application with current & saving accounts, money management, wire transfers, card management & many more exciting features coming to the next few months.

We are launching on the French & Belgium market and are planning for a launch in other Eurozone countries as soon as 2023 but the team is already international with people working from all around France, Germany, and the Netherlands with offices in Paris in which Marketing & Finance team are meeting once a week. The tech team is fully remote and meet the rest of the team in Paris every 2 month.

That said, you can work from wherever you want, whenever you want, as long as you deliver, and your time zone is not too different from CET.

We try to avoid "meetings" as much as possible. But we spend a lot of time talking to each other. We intend to build a long-term relationship with our employees. So,

our job is to make you happy and productive, and your job is to build the company.

We try to have a perfect alignment of interest. Everyone has shares in the company, as everyone has share in the planet.

Your missions

We have a serverless backend on AWS with a Mongo database. For business logic and regulation issues that I can explain.

The application conception process is still very much ongoing, so testing is our weak point. Detox ? Appium ? That will be one of your first job here. Payment is serious. We don't ship when marketing says so. We ship when we are ready and confident that we have no critical bug. It's ready when it's ready. The written code has to be tested and maintainable. Ability to write code is important, but ability to read code is crucial.

You would work with:

- React Native
- TypeScript
- Testing library
- Figma
- Expo
- Git
- Notion
- Mongo DB

What do we expect:

- Good communication skills in English.
- Strong sense of ownership is a must; when charge of a domain, that's yours to manage.
- Initiative. If you think that something needs improvement, say it and do it.
- Have worked and delivered mobile apps for 4+ years.
- If you have worked with a TDD workflow, that would be a great bonus point.
- Clean Code.

Package:

- 50k€ a year
- Stock option
- Remote
- Paid Vacation
- Health Insurance (if working from France)
